

Asset Management and Maintenance Tracking System

Problem Statements and Scope

Option 1: Corporate IT Asset Management

Problem Statement

Many organizations manage IT assets such as laptops, desktops, printers, and monitors using spreadsheets or manual records. This leads to inaccurate asset tracking, delayed maintenance, and difficulty in monitoring asset allocation and availability.

Scope

- User authentication
- Add and manage IT assets
- Allocate assets to employees
- Track asset status and availability
- Schedule and track maintenance
- Dashboard and reports

Option 2: Office Equipment Maintenance Tracking

Problem Statement

Organizations often fail to maintain office equipment regularly due to the absence of a centralized maintenance tracking system. This results in frequent equipment failures, higher repair costs, and reduced productivity.

Scope

- Equipment inventory management
- Maintenance request creation
- Preventive maintenance scheduling
- Service history tracking
- Maintenance status updates
- Reports and notifications

Option 3: University Asset Management System

Problem Statement

Educational institutions manage laboratory equipment, computers, projectors, and furniture manually, making it difficult to track asset usage, maintenance, and department-wise allocation.

Scope

- Department-wise asset management
- Asset allocation and transfer
- Maintenance request management
- Warranty tracking
- Inventory reports
- Admin dashboard

Option 4: Warehouse Asset and Inventory Management

Problem Statement

Warehouses often struggle to monitor tools, machinery, and equipment due to manual inventory management, resulting in misplaced assets, delayed maintenance, and inaccurate stock records.

Scope

- Asset inventory management
- Stock availability tracking
- Maintenance scheduling
- Asset movement history
- Barcode/QR-ready design
- Reporting dashboard

Option 5: Enterprise Asset Lifecycle Management

Problem Statement

Organizations face challenges in managing the complete lifecycle of assets—from procurement and allocation to maintenance and disposal—due to disconnected systems and manual processes. This reduces asset utilization and increases operational costs.

Scope

- Asset registration and categorization
- Asset allocation and return
- Maintenance tracking
- Warranty and lifecycle management
- User role management
- Analytics dashboard and reports
